COMPLETE SPECIFICATION ACCEPTED

Notice is hereby given that any person interested in opposing the grant of patents on any of the applications concerned, may, at any time within four months of the date of this issue or within such further period not exceeding one month applied for on Form 14 prescribed under the Patents Rules, 1972 before the expiry of the said period of four months, give notice to the Controller of Patents on the prescribed Form 15, of such opposition. The written statement of opposition should be filed along with the said notice or within one month of its date as prescribed in Rule 36 of the Patents Rules, 1972.

"The classifications given below in respect of each specification are according to Indian Classification and International Classification."

A limited number of printed copies of the specifications listed below will be available for sale from the Government of India Book Depot, 8, Kiran Sankar Roy Road, Calcutta, in due course. The price of each specification is Rs. 2/- (postage extra if sent out of India). Requisition for the supply of the printed specifications should be accompanied by the number of the specifications as shown in the following list.

Typed or photo copies of the specifications together with photo copies of the drawings, if any, can be supplied by the Patent Office, Calcutta on payment of the prescribed copying charges which may be ascertained on application to that office. Photo copying charges may be calculated by adding the number of pages in the specification and drawing sheets mentioned below against each accepted specification and multiplying the same by four to get the charges as the copying charges per page are Rs. 4/-.

PROCESS FOR RECOVERING USED LUBRICATING OILS.

Applicant : PHILLIPS PETROLEUM COMPANY, OF BARTLESVILLE, STATE OF OKLAHOMA, UNITED STATES OF AMERICA.

Inventors : GERHARD PAUL NOWACK, DONALD CALVIN TABLER AND MARVIN MERRILL JOHNSON.

Application No. 509/Cal/78 filed May 11, 1978.

Appropriate office for opposition Proceedings (Rule 4, Patents Rules, 1972) Patent Office, Calcutta.

23 Claims.

A process for the recovery of an essentially ash-free lube oil stock from a used lubricating oil containing ash-forming components which comprises:

(a) contacting said used lubricating oil with an aqueous solution of a treating agent consisting essentially of an ammonium salt as hereinbefore described, dispersing the said agent in said used lubricating oil enabling the said agent to react with the ash-forming components of said used oil;

(b) removing in a conventional manner a major portion of water and light hydrocarbon components from the resulting mixture of used oil and aqueous treating agent from step (a); and

(c) separating in a conventional manner the oil phase from the residual mixture resulting from step (b).

Applicant : ELI LILLY AND COMPANY, AT 307 EAST MCCARTY STREET, CITY OF INDIANAPOLIS, STATE OF INDIANA, UNITED STATES OF AMERICA.

Inventor : HAROLD MELLON TAYLOR.

Application No. 567/Cal/78 filed May 25, 1978.

Appropriate office for opposition Proceedings (Rule 4, Patents Rules, 1972) Patent Office, Calcutta.

6 Claims.

A process for preparing a compound of the formula I.

wherein : X is oxygen R is methyl, ethyl, acetoxy or hydroxy; the R¹ groups independently are halo; C₁-C₄ alkyl; C₁-C₄ alkyl substituted with halo; nitro; carboxy; hydroxy; C₁-C₂ alkoxy-carbonyl; -O-R³; -S-R⁴; -SO-R⁴; or C₁-C₂-R⁴.

R³ is C₁-C₂ alkyl; C₁-C₂ alkyl substituted with halo; benzyl or phenyl R² is cyano; C₁-C₃ alkoxy-carbonyl; C₁-C₄ alkyl; C₁-C₄ alkyl substituted with halo, hydroxy or C₁-C₃ alkoxy; thienyl; -O-R⁴; -S-R⁴; -SO-R⁴; -SO₂-R⁴; or group of formula A.

R⁴ is C₁-C₆ alkyl; C₁-C₄ alkenyl; benzyl, phenyl; or phenyl substituted with trifluoromethyl, halo, C₁-C₃ alkyl, nitro, C₁-C₃ alkylthio or C₁-C₃ alkoxy; the R⁵ groups independently are halo; C₁-C₄ alkyl; C₁-C₄ alkyl substituted with halo; nitro; carboxy; hydroxy; C₁-C₂ alkoxy-carbonyl; -O-R⁶; -S-R⁶; -SO-R⁶; or -SO₂-R⁶; R⁶ is C₁-C₂ alkyl; C₁-C₂ alkyl substituted with halo; benzyl; or phenyl; m and n independently are 0, 1 or 2; provided that when X is oxygen, R is methyl, and R₂ is unsubstituted phenyl, then m is 1 or 2; and the acid addition salts thereof; which process is characterized by reacting a compound of the formula II.

wherein R^1 , R^2 and m are defined above, and Q^1 and Q^2 are independently selected from the group consisting of

$=\text{CHOH}$ AND

$=\text{CHN}(R^7)_2$

in which the R^7 groups independently are C_1 - C_3 alkyl, or the R^7 groups combine with the nitrogen atom to which they are attached to form pyrrolidino, piperidino, morpholino or N-methylpiperazino; with a compound of the formula

wherein Y is hydrogen, hydroxy, methyl or ethyl to provide a compound of the formula III.

optionally followed by alkylating or esterifying in a conventional manner the compound of Formula III wherein Y is hydrogen or hydroxy respectively to provide the corresponding compound wherein Y is R ; and, if desired, recovering the product in the form of an acid addition salt;

5 Claims.

A pneumatic conveying apparatus for conveying pulverulent material comprising a feed column for feeding the said material, a material forwarding chamber in operational association with said feed column, said material forwarding chamber having a porous fluidisation wall within it, a gas feed tube connected to said feed chamber for admitting a selected flow of gas at super-pressure, said gas feed tube having an injector situated above said porous fluidisation wall, a pneumatic conveyor tube provided in said forwarding chamber facing the feed tube, the pneumatic conveying tube having a nozzle at its end facing the gas feed tube, the axis of the gas feed tube being arranged to lie in the axis of the orifice of the pneumatic conveying tube, a fluidisation gas supply tube connected to said forwarding chamber below the said porous fluidisation wall for supplying fluidisation gas, said fluidisation gas supply tube having control means for controlling the flow of gas there-through, the arrangement being such that when the material to be pneumatically conveyed is fed to the material feed tube, talus formed at the foot of the feed tube by the build-up of material in the space between the porous fluidisation wall and the lower end of the material feed tube is capable of being disturbed automatically by the regulated or controlled supply of fluidisation gas from the fluidisation gas tube provided therefor by the flow of fluidisation gas through the porous wall and the material to be conveyed in order to bring the material into the flow of the gas through the pneumatic tube, this being achieved by presetting a pressure P_f below the porous wall based on the desired flow of material in the pneumatic conveyor tube, the fluidisation gas passing through the fluidisation gas tube increasing with the decrease in a pressure (p_c) (to values below said preset pressure P_f) and which pressure P_c is built up over the fluidisation wall due to the build-up of material, and the flow of fluidisation gas through the fluidisation gas tube decreasing with the increase in the pressure P_c above the preset value of pressure P_f and which pressure P_c is developed by the material above

the fluidisation wall, this being so co-ordinated that the fluctuations in the pressure build-up above the fluidisation wall is immediately compensated by the flow of fluidisation gas such that the material flow rate through the pneumatic conveying tube is not disturbed.

Notice is hereby given that Sunkist Growers, Inc., a corporation organized and existing under the laws of the State of California, United States of America, of 14130 Riverside Drive, Sherman Oaks, State of California, United States of America, have made an application under section 57 of the patent Act, 1970 for amendment of specification of their application for patent No. 141770 for "Apparatus for automatically selecting between a plurality of generally spherical objects based on the optical transparency characteristics thereof." The amendments are by way of correction so as to describe and ascertain the invention more correctly and precisely. The application for amendment and the proposed amendments can be inspected free of charge at the Patent Office 214, Acharya Jagadish Bose Road, Calcutta-700017 or copies of the same can be had on payment of the usual copying charges. Any person interested in opposing the application for amendment may file a notice of opposition on the prescribed form 30 within three months from the date of this notification, at the Patent Office, Calcutta. If the written statement of opposition is not filed with the notice of opposition it shall be left within one month from the date of filing the said notice.

COMMERCIAL WORKING OF PATENTED INVENTIONS

MECHANICAL & GENERAL LIST 1

(1)

The following Patents in the field of Mechanical and General Engineering Industry are not being commercially worked in India as admitted by the Patentees in the statements filed by them under section 146(2) of Patents Act, 1970, in respect of calendar year, 1980, generally on account of want of requests for licences to work the Patented inventions.

Persons who are interested to work the said Patents commercially may contact the Patentess for the grant of Licence for the purpose.
